

As conexões hidráulicas MECH são fabricadas em ferro fundido maleável, com padrão de rosca BSP e galvanizadas a fogo através do processo de zincagem por imersão a quente pela. Este método é realizado de acordo com os parâmetros estabelecidos pela NBR ABNT.

As conexões são projetadas para suportarem pressões internas de 10Mpa sob temperatura ambiente e são ideais para aplicação em redes hidráulicas de combate a incêndio. Também são muito utilizadas em sistemas voltados para o transporte de ar comprimido e vapor, pois atendem às aplicações para condução de fluidos sob pressão máxima de serviço de 2,5Mpa, em ambientes com temperaturas entre 120°C e 300°C e de 2,0Mpa sob a temperatura de 300°C.
